

Operating instructions Coffee machine

To avoid the risk of accidents or damage to the appliance it is **essential** to read these instructions before it is installed and used for the first time.

Warnings and safety notes

This coffee machine complies with all the stipulated safety requirements. Inappropriate use can, however, lead to personal injury and material damage.

Read the operating instructions carefully before using the coffee machine. They contain important information on the installation, safety, use and maintenance of the appliance. This prevents both personal injury and damage to the coffee machine.

In accordance with standard IEC 60335-1, Miele expressly and strongly advises that you read and follow the instructions in the chapter on installing and connecting the coffee machine as well as the safety instructions and warnings.

Miele cannot be held liable for injury or damage caused by non-compliance with these instructions.

Keep these operating instructions in a safe place and pass them on to any future owner.

Correct application

- ▶ This coffee machine is intended for home use.
- ▶ This coffee machine is not intended for outdoor use.
- ▶ This coffee machine must not be used at altitudes above 2000 m.
- ▶ It must only be used as a domestic appliance to make espresso, cappuccino, latte macchiato, tea etc. Any other use is not permitted.
- ▶ This coffee machine can only be used by people with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, if they are supervised whilst using it, or have been shown how to use it in a safe way and recognise and understand the consequences of incorrect operation.

Safety with children

 Danger of burning and scalding on the dispensing spouts.

Children's skin is far more sensitive to high temperatures than that of adults.

Ensure children do not touch hot surfaces of the coffee machine or place parts of their body under the dispensing spouts.

- ▶ Install the coffee machine where it is out of the reach of children.
- ▶ Children under 8 years of age must be kept away from the coffee machine and the mains connection cable and plug/socket.
- ▶ Children aged 8 and older may only use the coffee machine without supervision if they have been shown how to use it in a safe manner.
Children aged 8 and older must be aware of the potential dangers caused by incorrect operation.
- ▶ Please supervise children in the vicinity of the coffee machine and do not allow them to play with it.
- ▶ Young children must not be allowed to clean the coffee machine at all. Cleaning may only be carried out by children 8 years of age or older under the supervision of an adult.
- ▶ Remember that coffee and espresso are not suitable drinks for children.

Warnings and safety notes

▶ Danger of suffocation! Whilst playing, children may become entangled in packaging material (such as plastic wrapping) or pull the packaging material over their head, presenting the risk of suffocation. Keep packaging material away from children.

Technical safety

▶ A damaged coffee machine is dangerous. Check it for any visible damage before setting it up. Never attempt to use a damaged coffee machine.

▶ To avoid the risk of damage to the machine, make sure the connection data (voltage and frequency) on the data plate corresponds to the household supply, before connecting the machine to the mains supply. Consult a qualified electrician if in any doubt.

▶ The electrical safety of this coffee machine can only be guaranteed when correctly earthed. It is essential that this standard safety requirement is met. If in any doubt please have the electrical installation tested by a qualified electrician.

▶ Temporary or permanent operation on an autonomous power supply system or a power supply system that is not synchronised with the mains power supply (e.g. island networks, back-up systems) is possible. A prerequisite for operation is that the power supply system complies with the specifications of EN 50160 or an equivalent standard.

The function and operation of the protective measures provided in the domestic electrical installation and in this Miele product must also be maintained in isolated operation or in operation that is not synchronised with the mains power supply, or these measures must be replaced by equivalent measures in the installation. As described, for example, in the current version of BS OHSAS 18001–2 ISO 45001.

▶ Do not connect the machine to the mains electricity supply by a multi-socket adapter or an extension lead. These are a fire hazard and do not guarantee the required safety of the appliance.

▶ The coffee machine must not be used in a non-stationary location (e.g. on a ship).

▶ Unplug the machine from the power supply immediately if you notice any damage or smell scorching, for example.

▶ Ensure that the mains connection cable cannot be pinched or damaged by any sharp edges.

Warnings and safety notes

- ▶ The mains connection cable should not hang down. Someone could trip over it with the risk of injury and damage the machine.
- ▶ Only use the coffee machine in rooms where the ambient temperature is between +10 °C and +38 °C.
- ▶ Position the coffee machine at a height of at least 850 mm from the floor.
- ▶ Danger of overheating. Please ensure that there is adequate ventilation around the coffee machine. Do not cover the coffee machine with tea towels etc. while it is in use.
- ▶ Protect the coffee machine from water and water spray. Do not immerse the machine in water.
- ▶ Repairs and other work by unqualified persons to the machine and the connection cable could be dangerous. The manufacturer cannot be held liable for unauthorised work. Repairs may only be carried out by a Miele authorised service technician.
- ▶ While the machine is under warranty, repairs should only be undertaken by a Miele authorised service technician. Otherwise the warranty is invalidated.
- ▶ The coffee machine must be disconnected from the electricity supply during repair work.
- ▶ Never open the outer casing of the machine. Tampering with electrical connections or components and mechanical parts is highly dangerous to the user and can cause operational faults or electric shock.

Correct use

 Danger of burning and scalding on the dispensing spouts. The liquids and steam dispensed are very hot.

Keep well away from the area underneath the spouts when hot liquids and steam are being dispensed.

Do not touch hot components.

Hot liquid or steam could spatter from the spouts. Ensure that the central spout is clean and fitted correctly.

Water in the drip tray can also be very hot. Take care when emptying it.

Warnings and safety notes

 Danger of injury to the eyes.

Never look directly at the lighting or use optical instruments to look at it.

▶ Please note the following regarding water:

- The water quality must conform to the requirements for drinking water in the country in which the coffee machine is being used.
- Only use cold, fresh tap water to fill the water container. Hot or warm water or other liquids can damage the coffee machine.
- Change the water every day to prevent a build-up of bacteria.
- Do not use carbonated water.

▶ Only fill the bean container with roasted espresso/coffee beans. Do not fill the bean container with coffee beans which have been treated with additives or with ground coffee.

▶ Do not fill the bean container with any type of liquid.

▶ Do not use green (unroasted) coffee beans or mixtures of coffee beans which contain green coffee beans. Green coffee beans are very hard and still contain residual moisture. These can damage the coffee machine grinder as soon as grinding begins.

▶ Do not use coffee beans which have been treated with caramel, sugar or other substances including sugary liquids. Sugar will damage the coffee machine.

▶ Only fill the coffee chute with ground coffee beans.

▶ Do not use any caramelised ready ground coffee. The sugar in the coffee will stick to and block the brew unit of the coffee machine. The cleaning tablets for degreasing the brew unit will not remove this type of deposit.

▶ Only use milk without additives. Additives in milk usually contain sugar and this will stick to the milk pipework.

▶ If using dairy milk make sure that it has been pasteurised.

▶ When making tea, please follow the instructions on the packaging.

▶ Do not place flaming alcohol mixtures underneath the central spout. The flames could ignite plastic components and cause them to melt.

▶ Do not use naked flames, e.g. a candle, on or near the coffee machine. The coffee machine could catch fire with the risk of the fire spreading.

- ▶ The machine must not be used for cleaning objects.
- ▶ Make sure that the coffee machine does not come into contact with hand sanitiser gel or sunscreen, as this will damage the surfaces.

Accessories and spare parts

- ▶ Miele can only guarantee the safety of the machine when original Miele spare parts are used. Faulty components must only be replaced by genuine Miele original spare parts.
- ▶ Only use original Miele accessories. If other parts are used, warranty, performance and/or product liability claims will be invalidated.
- ▶ Miele will guarantee to supply functional spare parts for a minimum of 10 years and up to 15 years following the discontinuation of your coffee machine.

Cleaning and care

- ▶ Refer to the relevant instructions in “Cleaning and care”.
- ▶ Clean the coffee machine and the milk flask (supplied as standard, depending on model) daily, particularly before using for the first time.
- ▶ All parts of the milk system need to be cleaned thoroughly and regularly. Milk contains bacteria which proliferate rapidly with inadequate cleaning.
- ▶ Do not use a steam cleaner to clean this machine. Steam could reach electrical components and cause a short circuit.
- ▶ Descale the coffee machine regularly depending on the water hardness level in your area. Descale the machine more frequently in areas with very hard water. Miele cannot be held liable for damage arising from insufficient descaling, the use of incorrect descaling agent or the use of descaling agent which is not of the appropriate concentration.
- ▶ Degrease the brew unit regularly with Miele cleaning tablets. Depending on the natural oil content of the coffee used, the brew unit can become blocked quite quickly.
- ▶ Used coffee grounds should be disposed of with the organic rubbish or on the compost heap. Do not empty them down the sink, as they could block it.

Warnings and safety notes

For machines with stainless steel surfaces:

- ▶ Do not use sticky notes, adhesive tape, masking tape or other types of adhesive on the stainless steel surfaces.
- ▶ Stainless steel surfaces are susceptible to scratching. Even magnets can cause scratches.

Disposing of the packaging material

The packaging material is used for handling and protects the appliance from transport damage. The packaging material used is selected from materials which are environmentally friendly for disposal and can generally be recycled.

Recycling the packaging material reduces the use of raw materials. Use material-specific collection points for valuable materials and take advantage of return options.

We recommend you keep the packaging material for transport purposes.

Saving energy

The following tips can help you save energy and money as well as care for the environment:

- Operate the coffee machine in Eco mode (default setting).
- Reduce the brightness of the display.
- Change the setting for the Switch off after timer to 20 minutes. The coffee machine will then switch itself off 20 minutes after the last drink was made or a sensor control was touched. If you increase the setting for the Switch off after timer, the energy consumption of the coffee machine will increase.
- Some changes to the factory default settings may increase the energy consumption of the coffee machine. Pay particular attention to the following message on the display: This setting uses more energy.
- If you only want to pre-heat your cups occasionally, you can switch the cup heating surface off.

- Switch the coffee machine off with the On/Off sensor control  if it is not going to be used for a while.

Disposing of your old appliance

Electrical and electronic appliances contain many valuable materials. They also contain certain materials, compounds and components which were essential for their correct functioning and safety. These could be hazardous to human health and to the environment if disposed of with household waste or if handled incorrectly. Please do not, therefore, dispose of your old appliance with household waste.

Instead, please make use of officially designated collection and disposal points to dispose of and recycle electrical and electronic appliances in your local community, with your dealer or with Miele, free of charge. By law, you are solely responsible for deleting any personal data from the old appliance prior to disposal. You are legally obliged to remove any old batteries which are not securely enclosed by the appliance and to remove any lamps without destroying them, where this is possible. These must be taken to a suitable collection point where they can be handed in free of charge. Please ensure that your old appliance poses no risk to children while being stored for disposal.

Installation

Electrical connection

The coffee machine is supplied with a mains cable with moulded plug ready for connection to a suitable earthed socket.

The socket must be easily accessible after the coffee machine has been installed. If the socket is not easily accessible, ensure that a suitable means of disconnection is provided on the installation side for each pole.

Risk of fire from overheating.

Connecting the coffee machine to multi-socket adapters or extension cables can overload the cables.

For safety reasons, do not use multi-socket adapters, extension cables, adapters and/or energy-saving plug.

The electrical system must comply with local and national safety regulations (BS 7671 in the UK).

For safety reasons, we recommend using a type  residual current device (RCD) in the relevant electrical installation for connecting the coffee machine.

If the mains connection cable is damaged, it must only be replaced with a specific mains connection cable of the same type (available from the Miele Customer Service Department). For safety reasons, such replacement may only be carried out by a qualified specialist or the Miele Customer Service Department.

The data plate indicates the nominal power consumption.

The fuse rating must be at least 10 A. Compare this information with the data of the on-site electrical connection. Consult a qualified electrician if in any doubt.

Temporary or permanent operation on an autonomous power supply system or a power supply system that is not synchronised with the mains power supply (e.g. island networks, back-up systems) is possible. A prerequisite for operation is that the power supply system complies with the specifications of EN 50160 or an equivalent standard. The function and operation of the protective measures provided in the domestic electrical installation and in this Miele product must also be maintained in isolated operation or in operation that is not synchronised with the mains power supply, or these measures must be replaced by equivalent measures in the installation.

Appliance dimensions

Installation

Installation

 Danger of overheating due to insufficient ventilation.

If the coffee machine is not sufficiently ventilated, the appliance can overheat.

Please ensure that there is adequate ventilation around the coffee machine.

Do not cover the coffee machine with tea towels etc. while it is in use.

If the coffee machine is installed behind a closed furniture front, heat and moisture can build up behind the furniture front when closed. This can result in damage to the coffee machine and/or furniture unit.

Do not close the furniture front while the coffee machine is in use.

When setting up the machine: make sure that the service panel can be fully opened so that the brew unit can be removed with ease when required.

- The machine must be set up in the niche such that it sits flush with the front edge of the niche.

Please observe the following installation instructions:

- The location of the machine must be dry and well ventilated.
- The ambient temperature of the room in which the machine is used must be between 10 °C and 38 °C.
- The coffee machine must be set up on a level surface. The surface must be water-resistant.

If the machine is installed in a niche, the niche must provide the following minimum dimensions:

Height	508 mm
Width	450 mm
Depth	555 mm

Product description

- ① Hot-water spout
- ② Control panel
- ③ Cup heater*
- ④ Water container
- ⑤ Ground coffee chute
- ⑥ Bean container
- ⑦ Grinder setting (behind the appliance door)
- ⑧ Brew unit (behind the appliance door)

- ⑨ Height-adjustable central spout
- ⑩ Drip tray with lid and waste container
- ⑪ Milk pipework aperture
- ⑫ Lower panel with drip tray cover

* depending on model: CM 6360, CM 6560

Familiarisation

Milk container and milk siphon

- ① Milk flask*
- ② Milk siphon
- ③ Milk pipework with rinse valve

* depending on model: CM 6360, CM 6560

Milk container in detail

- ① Connecting piece
- ② Lid
- ③ Sealing ring
- ④ Stainless steel tube
- ⑤ Glass

Connecting piece for milk siphon and milk container

You can prepare milk with the milk siphon or milk container (included in the scope of delivery depending on the model).

There is one connecting piece included in the scope of delivery which can be inserted either into the milk siphon or into the milk container lid.

The appliance is supplied with the connecting piece either enclosed separately or inserted into the milk container lid (depending on the model). The connecting piece is easy to push out from the inside of the milk container lid.

Accessories supplied

- **Starter set “Miele appliance care”**
Various cleaning products are supplied depending on model.
- **Cleaning brush**
for cleaning the milk pipework
- **Milk siphon**
For preparing milk directly from the sales packaging
- **Milk flask with lid**
For storing and preparing milk (included depending on model)

Controls and indicators

- ① **On/Off button** 

For switching coffee machine on and off
- ② **Display**

For showing information about the current action or status
- ③ **Drink buttons**

For making drinks
- ④ **Optical interface**

(For Miele Customer Service Department only)
- ⑤ **Sensor control** 
 - For making other drinks: ristretto, cappuccino italiano, flat white, café au lait, hot milk and milk froth, hot water, warm water, coffee pot function
 - Maintenance programmes
 - Profiles
 - Settings
- ⑥ **"2 portions" sensor** 

For dispensing 2 portions of a drink at once
- ⑦ **"DoubleShot" sensor** 

For making a particularly strong and aromatic coffee by using twice as much ground coffee but the same amount of water
- ⑧ **OK sensor**

For confirming display messages and saving settings
- ⑨ **Arrow buttons** 

For scrolling through lists, selecting entries or changing values
- ⑩ **"Back" sensor** 

For returning to the previous menu and cancelling unwanted actions
- ⑪ **MobileStart sensor control** 

For activating the Remote start option for making drinks via the Miele app

Symbols in the display

The following symbols may also appear in the display in addition to the text:

Familiarisation

Symbol	Explanation
	This symbol indicates the “Settings” menu and the “Language” menu option.
	This symbol indicates that there is additional information and advice about using the coffee machine. Select <i>OK</i> to confirm the messages.
	The symbol is displayed when the system lock is switched on. The controls are locked.
	The TeaTimer minute minder has been started (see “TeaTimer”). The remaining brewing time is shown next to the symbol.
	This symbol appears while the appliance is being descaled. This symbol can also be found on the water container: fill up to this mark.
	If Miele@home has been activated for the coffee machine, these symbols represent the quality/status of the WiFi connection, indicating the strength in increments from strong to not connected.

Drink button symbols

	Espresso
	Coffee
	Long coffee
	Cappuccino
	Latte macchiato
	Espresso macchiato
	Tea water

Operation

Sensor controls

To operate the coffee machine, touch the sensor controls with your finger.

An audible signal is generated each time a sensor is touched. You can adjust the volume of the keypad tones or switch the tones off (see “Adjusting settings – Volume”).

Drinks menu

When the following appears in the display, you are in the drinks menu:

Select drink.

You can find more drinks in the Further menu (☐ sensor control).

Selecting a menu and navigating within a menu

To select a menu, touch the relevant sensor control, e.g. the ☐ sensor control.

You will then be able to start an action or change settings in the menu. A bar on the right-hand side of the display indicates that further options or text are available.

To select a menu option, keep pressing the ^∨ sensor controls until the option you want is highlighted.

As soon as you reach a confirmable value, message or setting, the *OK* sensor control will light up orange.

Touch the *OK* sensor control to confirm your selection.

The setting that is currently selected in a list will have a tick ✓ beside it.

Exiting a menu or cancelling an action

To exit the current menu, touch the ↩ sensor.

Alternatively, touch the lit orange sensor again to return to the drinks menu.

Miele@home

Your coffee machine is equipped with an integrated WiFi module.

Before installing the coffee machine at the installation site, ensure that the signal from your WiFi network is strong enough.

To use this feature, you will need:

- A WiFi network
- The Miele app
- A Miele user account (this can be created from the Miele app)

The Miele app will guide you through the process of connecting your coffee machine to your home WiFi network.

Once your coffee machine is connected to your WiFi network, you can use the Miele app to carry out activities such as the following:

- Installing software updates
- Calling up information on the operating status of your coffee machine

Familiarisation

- Changing settings on your coffee machine
- Controlling your coffee machine remotely

Connecting your coffee machine to your WiFi network will increase energy consumption, even when the machine is switched off.

Availability of the WiFi connection

The WiFi connection shares a frequency range with other appliances (including microwave ovens and remote control toys). This can give rise to sporadic or even complete connection failures. Therefore, the availability of featured functions cannot be guaranteed.

Miele@home availability

The ability to use the Miele app depends on the availability of the Miele@home service in your country.

The Miele@home service is not available in every country.

For information about availability, please visit www.miele.com.

Miele App

The Miele App is available to download free of charge from the Apple App Store® or from the Google Play Store™.

Coffee drinks

Coffee or espresso can be made from whole roasted coffee beans which are freshly ground in the coffee machine for each portion.

Alternatively, you can make coffee drinks with ready ground coffee.

Tip: If you want to use green coffee beans, you can use a nut or seed grinder to grind them. These types of grinder generally have a rotating stainless steel blade. You can then add the ground green coffee **one portion at a time** to the ground coffee chute and make the desired coffee drink.

You can use your coffee machine to prepare the following coffee-based drinks:

- Ristretto
- Espresso
- Coffee
- Long coffee
- Cappuccino
- Cappuccino Italiano
- Latte macchiato
- Caffè latte
- Espresso macchiato
- Flat white
- Café au lait

Tea drinks

To make tea, you can select from the following options:

- Japanese tea
- White tea
- Green tea
- Black tea
- Herbal tea
- Fruit tea

Special functions

DoubleShot

Select the DoubleShot  function if you would like a particularly strong and aromatic coffee. In this case, more coffee beans will be ground and brewed halfway through the brewing process. The shorter extraction time means that fewer unwanted aromas and bitter compounds will be released.

DoubleShot can be activated for all drinks apart from “Ristretto”.

Coffee pot

You can make several cups of coffee one after the other automatically with the coffee pot function, e.g. to fill a coffee pot.

This can make up to 8 cups in succession (max. 1 litre).

TeaTimer

You can use the TeaTimer function to start a minute minder when making tea. There is a preset brewing time for the type of tea selected, but this can be changed.

Cup heating

Depending on the model: CM 6360, CM 6560.

You can pre-heat cups or glasses on the cup heating surface on the top of the coffee machine.

Cups should always be pre-heated to allow the flavour of the coffee to develop and its temperature to be retained.

When the cup heating surface is activated, the cup rest will be heated continually until the coffee machine is switched off. This increases the energy consumption of the coffee machine.

Expert mode

The Expert mode function allows you to change the portion size while the drink is being made. The setting will **not** be saved and will only apply for the current drink.

Profiles

In addition to the Miele drinks menu (Miele profile), you can create individual profiles to cater for different tastes and preferences.

Within the profile, you can adjust the portion sizes and parameters individually for all drinks.

Commissioning

Before using for the first time

- Remove any notices from the machine.

- Remove the protective foil from the drip tray cover and place the drip tray cover into the lower panel.
- Place the coffee machine on a flat surface that is not sensitive to water (see “Installation”).

Clean the appliance before filling it with water and coffee beans. Refer to the relevant instructions in “Cleaning and care”; for example, clean the bean container with a soft, dry cloth.

- Clean the water container, the bean container and the central spout.
- Remove the water container and fill it with fresh, cold tap water. Only fill the water container up to the “max.” marker and then refit it in the machine.
- Take the lid off the bean container, fill it with roasted coffee beans and replace the lid.
- Insert the plug of the coffee machine into the socket.

Switching on for the first time and commissioning

- Touch the On/Off button  if nothing is visible on the display.

Selecting the display language

- Select the desired display language.

You might also be asked for your location.

Setting up the network (Miele@home)

To receive software updates and operate the coffee machine via the Miele app on your mobile device, you can connect your coffee machine to your home WiFi network.

The following appears in the display during commissioning: Set up “Miele@home”.

Tip: You can also choose to set up Miele@home at a later point. In this case, select Skip.

- Make sure that your WiFi network signal is sufficiently strong in the coffee machine’s installation site.
- Touch Continue.
- Select the connection method you wish to use.
- Follow the instructions provided in the coffee machine display and in the Miele app.

Connection successfully established. will appear in the display.

Any new software that is available for your coffee machine will be downloaded via RemoteUpdate the next time the appliance is switched on. In this case, you will be notified that you can install the new software (see “RemoteUpdate” section).

Networking increases the energy consumption of the coffee machine.

- Touch *OK* to proceed with commissioning.

Setting the water hardness level

Contact your local water supplier to find out your local water hardness range if necessary.

More information can be found under “Settings – Water hardness”.

- Enter your local water hardness (in °dH) and confirm with *OK*.

Selecting the Performance mode

You can select the appropriate Performance mode to suit your personal preferences (see “Adjusting settings – Performance mode”):

- **Eco mode:** This mode consumes the least amount of energy (default setting).
 - **Barista mode:** This mode has been optimised for unadulterated coffee enjoyment.
 - **Latte mode:** In this mode, milk-based drinks can be prepared within a much shorter space of time.
- Select the Performance mode you want.
 - Confirm with *OK*.

Selecting a Performance mode other than Eco mode increases the energy consumption of the coffee machine.

Completing the commissioning process

Your machine has been successfully set up and is ready for use.

- Confirm with *OK*.

The coffee machine heats up and rinses the pipework. The water used for rinsing will run out of the central spout.

- Before making drinks with milk for the first time, rinse the milk pipework (see “Rinsing the milk pipework”).

Please note that the full aroma of the coffee and typical crema will not develop fully until several coffees have been made.

To ensure that any coffee residues from the factory testing process are removed from the brewing system, please throw away the first 2 cups of coffee when using the coffee machine for the first time.

For the first coffee drinks, a larger quantity of coffee beans is ground. This means that powder from the coffee grounds may adhere to the lid of the drip tray.

To switch the coffee machine off after use, touch the On/Off button . **Do not** pull out the plug – if you unplug the coffee machine from the mains supply shortly after setting it up, you will have to set it up for use again.

Operation

Switching the coffee machine on

- Touch the On/Off button .

The coffee machine heats up and rinses the pipework. Hot water will run out of the central spout.

When **Select drink** appears in the display, you can make drinks.

If the coffee machine is already at operating temperature, rinsing will not take place when the machine is switched on.

Filling the coffee bean container

 Risk of damage to the grinder due to incorrect operation.

The coffee machine will be damaged if the bean container is filled with unsuitable substances such as liquids, ground coffee or coffee beans treated with caster sugar, caramel or similar.

In addition, green (unroasted) coffee beans or mixtures of coffee beans which contain green coffee beans can damage the grinder. Green coffee beans are very hard and still contain residual moisture. These can damage the coffee machine grinder as soon as grinding begins.

Only put roasted coffee beans in the bean container.

Coffee or espresso can be made from whole roasted coffee beans which are freshly ground in the coffee machine for each portion. This requires the coffee bean container to be filled with coffee beans.

Alternatively, you can make coffee drinks with ready ground coffee.

Tip: You can use a nut or seed grinder to grind green coffee beans. These types of grinder generally have a rotating stainless steel blade. You can then add the ground green coffee **one portion at a time** to the ground coffee chute and make the desired coffee drink.

- Take the lid off the coffee bean container.
- Fill the container with roasted coffee beans.
- Replace the lid.

Tip: Only add enough beans to last for a few days. Contact with air causes coffee beans to lose their aroma.

Filling the water container

 Risk to health due to contaminated water.

Bacteria can develop in water which has been sitting in the water container for too long and is a risk to your health.

Change the water in the water container **every day**.

 Risk of damage due to incorrect operation.

Unsuitable liquids such as hot or warm water or other liquids can damage the coffee machine. Bottled mineral water leaves too much limescale in the coffee machine.

Only use cold, fresh tap water to fill the water container.

If the water container is sitting too high or at an angle, this will prevent the dispenser valve from attaching correctly and water can leak out. Check whether the surface under the water container is soiled. Clean the surface underneath the water container if necessary.

- Press the lid on the right side.
- Pull the water container up by the lid to remove it.
- Fill the water container with fresh, cold drinking water up to the *max.* mark.
- Push the water container back into the machine.

Adjusting the central spout to the correct cup height

You can adjust the central spout to suit the height of the cup you are using so that the coffee or espresso will not cool down as quickly and the crema will have a better consistency.

- Pull the central spout down until it is at the same level as the rim of the cup. Alternatively, push the central spout up until there is enough room to fit a larger cup or mug underneath.

Parameters

Displaying and changing parameters

You can change the portion size for all drinks.

In addition, you can set the quantity of coffee, the brewing temperature and pre-brewing for each coffee drink individually.

- Touch .
- Select Parameters.
- Select a drink.
- Confirm with *OK*.

The parameters that can be changed for this drink are displayed.

Operation

Once you have selected a drink, the current settings for the following appear: Amount of coffee, Brew temperature and Pre-brewing.

The Portion size menu option is displayed in the first line. If you select Portion size and confirm with *OK*, the drink will be dispensed immediately.

- Select the parameter you want.
- Change the setting as required.
- Confirm with *OK*.

The setting is now saved.

Changing the portion size

You can change the portion size in Expert mode for the current drink or on a permanent basis. If you want to change the portion size of the drink permanently, change the Portion size parameter.

- Place a cup under the central spout.
- Touch .
- Select Parameters.
- Select a drink.
- Confirm with *OK*.

The parameters that can be changed for this drink are displayed.

- Select Portion size.
- Confirm with *OK*.

The required drink will now be made. As soon as the minimum amount has been made, *Save* will be shown on the display.

- When the cup is filled up to the level you want, touch *OK*.

If you want to change the portion size for coffee drinks made with milk, the ingredients that make up the drink will be saved one after the other while the drink is being made.

- When the quantity for each ingredient reaches the level you want, touch *OK*.

The programmed portion size will now be dispensed every time that particular drink is selected.

Tip: For the drinks pictured on the control panel, you can change the portion size by pressing and holding the button down. To do this, keep the drinks sensor pressed until the preparation process starts. As soon as the minimum amount has been made, *Save* will be shown on the display.

If the water container becomes empty whilst making a drink, the coffee machine will stop programming the portion size. The new portion size will **not** be saved.

Expert mode

Switching Expert mode on and off

The drinks menu is displayed.

- Touch the  sensor control.
- Select Settings  | Expert mode.
- Select the option you want.
- Confirm with *OK*.

The setting is now saved.

Changing the portion size in Expert mode

The portion size can only be changed when the respective ingredient is being processed while the drink is being made. The new portion size will not be saved.

If you select DoubleShot  or 2 portions , Expert mode cannot be used to change the portion size.

The drinks menu is displayed.

- Select a drink.

Dispensing starts. You can adjust the portion size while it is being dispensed, e.g. individually change the amount of hot milk, milk froth and espresso for a latte macchiato.

- Use the \wedge and \vee sensor controls to move the indicator (small triangle) as you wish.

Profiles

Creating a profile

- Touch the  sensor control.
- Select Profiles.
- Confirm with *OK*.

The Profiles menu opens.

- Select Create profile.

The editor will open in the display.

Letters and numbers are entered using the \wedge and \vee sensor controls. You can choose between upper and lower case letters.

- To enter a character, highlight the one you want and confirm your choice with *OK*.
- To delete a character, touch the \leftarrow sensor control.
- To save the name, select the tick \checkmark and confirm with *OK*.

- Enter the profile name.

Tip: It is best to select short names.

The profile has been created.

The name of the current profile is shown in the top left of the display.

Making drinks stored in a profile

- Touch the  sensor control and select Profiles. Confirm with *OK*.
- Select the profile you want.
- Select the drink you want.

The machine starts dispensing the drink.

Changing drinks within a profile

When you change the parameters of a drink within a profile, these settings only apply to the active profile. The settings for drinks contained within other profiles remain unaffected.

- Touch the  sensor control.

Operation

The Profiles menu opens.

- Select the profile you want.

The name of the selected profile is shown in the top left of the display.

You can now change the drinks individually.

Editing profiles

Once you have created at least one profile, you can edit the profiles in the Profiles menu.

- Touch the  sensor control.

The Profiles menu opens.

- Select Edit.
- Confirm with *OK*.

You can now edit the following settings for the selected profile:

- Setting when the profile should change
- Changing the profile name
- Deleting a profile

Setting when the profile should change

- Touch the  sensor control.

The Profiles menu opens.

- Select Edit.
- Confirm with *OK*.
- Select Change profile.
- Confirm with *OK*.

You have the following options:

- **Manual:** The selected profile will remain active until you select another one.
- **After each use:** The machine will revert to the Miele profile whenever a drink is dispensed.

- **When switched on:** The Miele profile will be displayed whenever the coffee machine is switched on, regardless of which profile was selected before the machine was last switched off.

- Select the option you want.
- Confirm with *OK*.

Changing the name

This option can only be selected if a profile has been allocated in addition to the Miele standard profile.

- Select Change name and confirm with *OK*.
- Change the name as required (see also “Creating profiles”).

Deleting the profile

This option can only be selected if one profile has already been created in addition to the Miele profile.

- Touch the  sensor control.

The Profiles menu opens.

- Select Edit.
- Confirm with *OK*.
- Select Delete profile.
- Confirm with *OK*.
- Select the profile you wish to delete.
- Select Yes.
- Confirm with *OK*.

The profile will be deleted.

Degree of grinding

Identifying the ideal degree of grinding

There are various ways to tell whether the degree of grinding is set correctly.

The degree of grinding is **too coarse** if:

- The espresso or coffee flows into the cup very quickly
- The espresso or coffee tastes sour
- The crema is very pale and uneven

The degree of grinding is **too fine** if:

- The espresso or coffee flows into the cup very slowly
- The espresso or coffee tastes too bitter
- The crema is dark brown

Adjusting the degree of grinding

If the degree of grinding is adjusted by more than one level, the grinder may be damaged.

Only ever adjust the degree of grinding one level at a time.

Each time you adjust the setting, start making a new drink so that the beans are ground. You can then adjust the degree of grinding by one level again.

- Open the appliance door.

- Push the slide control a maximum of one level to the left (for finer grinding) or to the right (for coarser grinding).

The selected degree of grinding will be used for all coffee drinks.

- Close the appliance door.

- Empty the drip tray **and** the waste container.
- Make one cup of coffee.

Adjust the degree of grinding again, if required.

The altered degree of grinding will not be used until after the second coffee has been dispensed.

The grinder will naturally wear out slightly over time. Set the grinder to a finer degree of grinding if necessary.

MobileStart

Switching MobileStart on and off

If you want to use MobileStart , the Remote control option must be switched on.

The drinks menu is displayed.

- Touch the sensor control.

The sensor control lights up. You can now start making a drink via the app. Follow the prompts to do this.

Preparing MobileStart

Danger of burning and scalding on the dispensing spouts.

If liquids or steam are dispensed while the machine is unsupervised, persons may burn themselves if they place body parts under the central spout or touch hot components.

Ensure that no one, especially children, can be harmed if the machine is operated without supervision.

Operation

Milk is **not** cooled in the milk container or in a milk carton. Milk may spoil if it is left in the milk container or carton for an extended period without being cooled (depending on the type of milk).

If you want to start making a drink with milk using the app, make sure that the milk is sufficiently cold ($< 10\text{ }^{\circ}\text{C}$).

In particular, do not leave cow's milk in the milk container or carton for an extended period without cooling it.

Please follow the manufacturer's instructions regarding the shelf life of the milk used.

With Mobile Start, you can start making a drink, for example, via the Miele app.

You will only be able to use Mobile Start if:

- Miele@home has been set up for your coffee machine and
- Mobile Start has been switched on.

- Make sure that the coffee machine is ready to use – for example, check that the water container and bean container are sufficiently filled.

- Place a sufficiently large, empty cup under the central spout.

You can now make drinks via the app.

If you are making a drink with Mobile Start, you will be notified when the drink is being dispensed via audible and visual signals. These signals cannot be changed or switched off.

If the coffee machine is being operated manually, it cannot be operated via the app. Operation on the appliance takes precedence.

Cup heating

Depending on the model: CM 6360, CM 6560.

Switching cup heating on or off

- Touch the  sensor control.
- Select Settings  | Cup heating.
- Select the option you want.
- Confirm with *OK*.

The setting is now saved.

Pre-heating the cups

- Arrange the cups or glasses on the cup heating surface on the top of the coffee machine.

Waking the coffee machine

If you do not touch any sensor control or run any maintenance programmes, the display will switch itself off after approx. 7 minutes to save energy. The *OK* sensor control will flash on and off as long as the coffee machine is switched on.

- Touch one of the sensor controls to wake the coffee machine up again to make a drink.

Preparing for an extended period of inactivity

If the coffee machine is not going to be used for more than 3 days, such as during a holiday, prepare the appliance for this.

- Empty the drip tray, the waste container and the water container.
- Clean all parts thoroughly, including the brew unit and appliance interior.
- Unplug the coffee machine to disconnect it from the power supply.

Switching the coffee machine off

- Touch the On/Off button .

If you have made a drink using milk, Place rinsing valve in drip tray will appear in the display.

- Insert the rinse valve into the right aperture in the drip tray cover.
- Confirm with *OK*.

If a drink has been dispensed, the coffee machine will rinse the pipework. The coffee machine will then switch off.

Making drinks

 Danger of burning and scalding on the dispensing spouts. The liquids and steam dispensed are very hot and can cause scalding. Keep well away from the area underneath the spouts when hot liquids and steam are being dispensed. Do not touch hot components.

Hot milk and milk froth

Preparing milk and alternative dairy products

Cow's milk or alternative plant-based dairy products (e.g. soy milk) containing added sugar can clog up the milk pipework and any other parts that carry milk. Residues from unsuitable liquids can interfere with milk preparation. The milk used must not contain any additives.

Dairy milk naturally contains bacteria. If using dairy milk, make sure that it has been pasteurised, e.g. pasteurised cow's milk.

You can prepare hot milk and milk froth using cow's milk or alternative plant-based dairy products.

As soon as you select a drink containing milk, the machine will start to heat up. The milk will be drawn up into the central spout where it is heated by steam and also frothed for drinks requiring milk froth. However, the consistency of the milk froth will vary greatly depending on the type of milk used. Not all types of milk are suitable for milk froth.

Tip: Using cold cow's milk (< 10 °C) with a protein content of at least 3 % will produce the perfect milk froth. You can select milk with a fat content according to preference. With whole milk (at least 3.5 % fat), the milk froth will be slightly creamier than with low-fat milk.

Alternative plant-based dairy products – hereafter referred to as “alternative dairy products” – contain different ingredients than cow's milk, for example. Due to natural settling, alternative dairy products tend to thicken. When preparing hot milk or milk froth, this thicker consistency can prevent the alternative dairy products from being drawn into the milk pipework.

Stir alternative dairy products well immediately before preparation.

Do not shake alternative dairy products. Shaking causes foam to form in the packaging and impairs the preparation process.

Tip: Rinse the milk pipework manually immediately after preparation.

Using the milk container

Milk is **not** cooled in the milk container.

Milk may spoil if it is left in the milk container for an extended period without being cooled (depending on the type of milk).

In particular, do not leave cow's milk in the milk container for an extended period without cooling it.

Please follow the manufacturer's instructions regarding the shelf life of the milk used.

Making drinks

If you have not made any milk drinks for a while, rinse the milk pipework thoroughly before making the first drink.

Tip: For high-quality milk froth, always use cold milk ($< 10\text{ }^{\circ}\text{C}$).

- Insert the connecting piece into the lid from above until everything sits flush.
- Connect the stainless steel tube to the inside of the lid. Make sure that the slanted end of the stainless steel tube is pointing downwards.
- If you use alternative dairy products, make sure that you stir the milk well. To ensure the best preparation, alternative dairy products must be stirred and not shaken.
- Fill the milk container with milk up to a maximum of 2 cm below the rim. Seal the milk container with the lid.

- Place the milk container to the right next to the coffee machine.
- Attach the milk pipework rinse valve to the milk container lid.
- Connect the milk container to the coffee machine by attaching the milk pipework to the aperture in the central spout.

The “seam” on the milk pipework and on the central spout makes it easier to assemble it correctly.

Using a milk carton with the milk siphon

If you have not made any milk drinks for a while, rinse the milk pipework thoroughly before making the first drink.

The milk siphon enables you to prepare milk directly from milk cartons or other suitable containers. The milk siphon is made up of a connecting piece and a long stainless steel tube.

Tip: For high-quality milk froth, always use cold milk ($< 10\text{ }^{\circ}\text{C}$).

Making drinks

- First insert the connecting piece onto the long stainless steel tube. Make sure that the slanted end of the stainless steel tube is pointing downwards.
- Attach the rinse valve to the connecting piece.

- If you use alternative dairy products, make sure that you stir the milk well. To ensure the best preparation, alternative dairy products must be stirred and not shaken.
- Place the milk carton to the right next to the coffee machine.
- Dip the milk siphon into the milk.
- Connect the milk pipework to the aperture in the central spout.

The “seam” on the milk pipework and on the central spout makes it easier to assemble it correctly.

Tip: Rinse the milk siphon under running water after use.

Coffee

Making a coffee

- Place a cup under the central spout.
- If you want to make a coffee with hot milk or milk froth, prepare the milk carton with the milk siphon or the milk container.
- Select a drink: touch the sensor control for the drink you want. Or select a drink from the Further | Other drinks menu (☐ sensor control).

Dispensing starts.

Cancelling a drink

- Touch the lit orange symbol on the control panel again.

When preparing drinks with several ingredients (e.g. latte macchiato), you can cancel each of the individual ingredients prematurely.

- When *Stop* appears in the display, confirm with *OK*.

Making a DoubleShot ☉ of coffee

- Touch the ☉ sensor control immediately before or after you start making a drink.

Dispensing starts and the ☉ sensor control lights up. 2 portions of coffee beans will be ground and brewed.

Making 2 portions ☐

You can dispense 2 portions of a drink into 1 large cup or into 2 cups at the same time.

- Place a cup under each of the dispensing spouts in the central spout.
- Touch the ☐ sensor control immediately before or after you start making a drink.

The ☐ sensor control lights up.

Dispensing starts and 2 portions of the desired drink will be dispensed.

Coffee pot: making several cups of coffee one after the other

You can make several cups of coffee automatically one after the other with the Coffee pot function (maximum of 1 litre).

The drinks menu is displayed.

Tip: Make sure that the bean and water containers have enough beans and water inside them before starting the Coffee pot function.

- Place a sufficiently large container under the central spout.
- Touch the ☐ sensor control.
- Select *Further | Other drinks | Coffee pot* and confirm with *OK*.
- Select the number of cups you would like (3 to 8).

Each portion of coffee will be brewed and dispensed individually. You can follow the process in the display.

Cancelling a drink

- Touch the ☐ sensor control.

Making coffee with ground coffee

To make drinks using ready ground coffee, add a portion of ground coffee to the ground coffee chute.

This allows you to make a decaffeinated coffee if the bean container is already filled with regular coffee beans, for example.

Only **1** portion of coffee or espresso can be made at a time when using ready ground coffee.

Making drinks

Place a **maximum of 12 g** in the ground coffee chute.
If too much ground coffee is added, the brew unit will not be able to process the coffee.

Adding ground coffee

The coffee machine will use all the ground coffee which has been added to the chute to make the next coffee.

- Open the ground coffee chute.

Place a maximum of **12 g** in the ground coffee chute.

- Add ready ground coffee to the chute.
- Close the coffee chute.

Making coffee with ground coffee

The following appears in the display: Use ground coffee?

- Select **Yes** and confirm with **OK**.

You can now select which type of drink you would like to make with ground coffee.

- Place a cup under the central spout.
- Select a drink.

The coffee will now be made.

If you select **No** and confirm this with **OK**, the ground coffee will be disposed of in the waste container without being brewed. The appliance rinses.

Tea

If the dispensing temperature is too high or too low or if the brewing time is too short or too long, this can affect the flavour of your tea.

Follow the instructions provided by the manufacturer of the tea you are making.

The coffee machine is not intended for commercial or scientific purposes. Dispensing temperatures given are approximate and can vary according to ambient conditions. A temperature increment of approximately 2 °C makes a difference.

Making tea

Touch the ☞ sensor control to access the menu containing the various types of tea.

The drinks menu is displayed.

- Pour loose tea into a tea filter or similar, or take a tea bag from the packet.
- Place the tea filter or the tea bag in the tea cup.

Dispensing warm or hot water

 Danger of burning and scalding on the hot water spout. The liquids and steam dispensed are very hot and can cause scalding.

Keep well away from the area underneath the spouts when hot liquids and steam are being dispensed.

Do not touch hot components.

- Place the cup under the hot water spout.
- Touch the  sensor control.
- Select the type of tea you would like.
- Confirm with *OK*.

Hot water will be dispensed into the cup.

If the *TeaTimer | Automatic* setting has been selected, the minute minder for the brewing time will start running once the water has been dispensed.

- Remove the tea filter or tea bag when the brewing time has elapsed.

Starting the TeaTimer manually

You can start the *TeaTimer* function manually.

TeaTimer appears in the display as soon as the water has been dispensed.

- Touch *OK*.

The editor will open with a suggested time.

- Change the brewing time if required.
- Confirm with *OK*.

After the brewing time has elapsed, a buzzer will sound and the  symbol will flash.

- Now remove the tea filter or the tea bag.

You can choose between the following options:

- Hot water at approx. 80 °C
- Warm water at approx. 60 °C

The drinks menu is displayed.

- Place a suitable container underneath the hot water spout.
- Touch the  sensor control.
- Select *Other drinks* and choose between warm or hot water.
- Confirm with *OK*.

Dispensing will start.

Good to know

Coffee drinks in detail

You can use the coffee machine to prepare the following coffee-based drinks:

- **Ristretto** is a strong, concentrated espresso. It is prepared with the same amount of coffee as for an espresso but with a lot less water.
- **Espresso** is a strong aromatic coffee with a thick, hazelnut brown-coloured froth – known as the crema – on top. We recommend using espresso-roasted coffee beans to make an espresso.
- **Coffee** differs from espresso by the increased amount of water and the roast of the beans. We recommend using coffee beans of the correct roast to make the coffee.
- **Long coffee** is a coffee with considerably more water.
- **Cappuccino** consists of approx. 2 thirds milk froth and 1 third espresso.
- **Latte macchiato** consists of 1 third each of hot milk, milk froth and espresso.
- **Caffè latte** consists of espresso and hot milk.
- **Cappuccino italiano** has the same proportions of milk froth and espresso as a cappuccino. The difference is that the espresso is added first and then the milk froth.
- **Espresso macchiato** is an espresso with a small amount of milk froth on top.

- **Flat white** is a special variety of cappuccino that contains significantly more espresso than milk froth for an intensive coffee aroma.
- **Café au lait** is a French style of coffee consisting of coffee and milk froth. Café au lait is usually served in a bowl.

Tea drinks in detail

To make tea, you can select from the following options:

- **Japanese tea** is a high-quality green tea which boasts a fine, fresh, “green” taste.
Dispensed temperature: approx. 65 °C, brewing time: approx. 1.5 minutes
- **White tea** is a green tea where only the young buds of the tea plant are used and processed very gently. White tea has a particularly mild taste.
Dispensed temperature: approx. 70 °C, brewing time: approx. 2 minutes
- **Green tea** gets its green colour from the leaves of the tea plant. The tea leaves are either roasted or steamed depending on the region. Green tea can be infused multiple times.
Dispensed temperature: approx. 77 °C, brewing time: approx. 2.5 minutes
- **Black tea** gets its dark colour and characteristic taste from the fermentation of tea leaves. Black tea can be enjoyed with a little lemon or milk.
Dispensed temperature: approx. 87 °C, brewing time: approx. 3 minutes

- **Herbal tea** is an aromatic infusion drink made up of dried leaves or fresh parts of plants.
Dispensed temperature:
approx. 87 °C, brewing time:
approx. 8 minutes
- **Fruit tea** is made from dried pieces of fruit and/or parts of plants, e.g. rose hip. The taste of the drink varies according to which plants are used and how they are blended. Lots of fruit teas are also flavoured.
Dispensed temperature:
approx. 87 °C, brewing time:
approx. 8 minutes

The preset dispensing temperature varies depending on the type of tea. The respective dispensing temperatures are the ones that Miele recommends for making the types of tea concerned.

Whether you use loose tea leaves, blended tea or tea bags depends on your own personal preference.

The amount of tea required varies from one type of tea to another. Always follow the recommendations of the manufacturer on the packaging or of the retailer. You can adjust the amount of water according to the type of tea and the size of the cup (see “Changing the portion size”).

Parameters

Portion size

The flavour of the coffee produced depends not only on the type of coffee, but also on the amount of water used. You can programme the amount of water for all drinks (apart from the Coffee pot function) to suit the size of your cups and/or the type of coffee you are using.

For coffee drinks that use milk, you can not only set the amount of espresso or coffee but also the amount of milk or milk froth to be dispensed with these drinks.

A maximum portion size can be programmed for each type of drink. Dispensing stops once this has been reached. The maximum possible portion size is then saved by the machine for this type of drink.

Quantity of coffee

The coffee machine can grind and brew 6-14 g of coffee beans per cup. The greater the quantity of ground coffee, the stronger the drink.

The quantity of coffee is **too low** if the espresso or coffee lacks body.

Increase the quantity of coffee to brew more ground coffee.

The quantity of coffee is **too high** if the espresso or coffee tastes bitter.

Decrease the quantity of coffee to brew less ground coffee.

Tip: If the coffee is too strong for you or it tastes bitter, try a different type of bean.

Brewing temperature for coffee drinks

The brewing temperature must be adapted to the beans you are using and how they are roasted. It also varies depending on whether you are making espresso or coffee.

Some bean types are sensitive to high brewing temperatures, resulting in an impaired taste. If your coffee tastes bitter, the brewing temperature you have selected might be too high.

Espresso is usually brewed at higher temperatures.

Good to know

Dispensing temperature for tea drinks

You can adjust the dispensing temperatures used for the individual teas by customising the brewing temperature.

A temperature increment of approximately 2 °C makes a noticeable difference.

Pre-brewing the ground coffee

When the pre-brewing function is turned on, the ground coffee is first moistened with a little hot water. The ground coffee swells a little. The remaining amount of water is then pressed through the moistened coffee grounds shortly after. If your coffee tastes too bland and you want to add some spice and richness, try the “Pre-brewing” function. Depending on the type of coffee used, pre-brewing can intensify the taste.

You can set a short or long duration for pre-brewing or turn the “Pre-brewing” function off completely.

Tip: We particularly recommend using the “Pre-brewing” function to make coffee.

Degree of grinding

The degree of grinding determines the contact time between the ground coffee and the water, known as the extraction time. Only when the ideal degree of grinding is selected can the machine dispense a perfect cup of coffee with a fine, hazelnut brown crema.

Displaying and changing Settings

The drinks menu is displayed.

- Touch the  sensor control.
- Select Settings .
- Confirm with *OK*.
- Select the menu option that you want to display or change.
- Confirm with *OK*.
- Change the setting as required.
- Confirm with *OK*.

Some settings which can be found in the Settings menu are described in their separate sections in the operating instructions.

Language

You can select the language (and location variant of that language) for all display text.

Tip: If you select the wrong language by mistake, you can find the “Language” option again via the  symbol.

Timer: switch off after

If none of the sensors have been touched or no drink has been made, the coffee machine will switch itself off after 20 minutes to save energy.

You can change this to another time (can be set between 20 minutes and 9 hours).

Extending the Switch off after time increases the energy consumption of the coffee machine.

TeaTimer

You can use the TeaTimer function to start a minute minder when making tea. There is a preset brewing time for the type of tea selected. You can adjust the preset brewing time (up to a maximum of 14:59 minutes).

You can set the TeaTimer as follows:

- **Automatic:** the TeaTimer starts automatically once the water has been dispensed.
- **Manual:** you have the option of starting the TeaTimer once the water has been dispensed.

While the brewing time is counting down, you can continue to use the coffee machine as normal. After the brewing time has elapsed, a buzzer will sound and the  symbol will flash.

Volume

You can set the volume of the welcome melody, buzzer and keypad tone (segment bar).

Display brightness

You can set the display brightness (segment bar).

The brighter the display brightness is set, the higher the energy consumption will be.

Lighting

You can change the brightness of the lighting while the coffee machine is switched on or off.

You can also specify how long the lighting should stay on for when the machine is switched off (adjustable between 15 minutes and 9 hours).

Adjusting settings

The brighter the lighting is set and the longer it is switched on, the higher the energy consumption of the coffee machine.

Info (display information)

You can display the number of drinks dispensed so far and how many more can be dispensed until the maintenance programmes have to be run.

Altitude

If the coffee machine is installed at high altitudes, the lower air pressure will cause the water to boil at a correspondingly lower temperature. You can set the local altitude to ensure the ideal drink preparation temperatures.

Performance mode

You can select the appropriate Performance mode to suit your usage habits:

- Eco mode
- Barista mode
- Latte mode

There is also a mode for occasional, intensive use of the coffee machine: Party mode.

Eco mode

In Eco mode, the coffee machine consumes the least amount of energy. The system does not heat up until someone starts making a drink.

Eco mode is set by default. Selecting a Performance mode other than Eco mode increases the energy consumption of the coffee machine.

Barista mode

This Performance mode has been optimised for unadulterated coffee enjoyment. Users can enjoy coffee-based drinks without any delay as the coffee machine remains heated to the brewing temperature.

Barista mode consumes more energy than Eco mode.

Latte mode

This Performance mode has been optimised for preparing milk. In Latte mode, milk-based drinks can be prepared within a much shorter space of time.

Latte mode consumes more energy than Eco mode and Barista Mode.

Party mode

This Performance mode has been configured for the **occasional** intensive use of the coffee machine, e.g. for family get-togethers.

Clean the coffee machine thoroughly after intensive use, particularly the milk pipework.

It may be necessary to descale the coffee machine and degrease the brew unit.

Please note the following information about Party mode:

- Cleaning status messages or cleaning prompts are suppressed and delayed until the machine is next switched on.
- The timer Switch off after is deactivated. The coffee machine switches off 6 hours after the last sensor control was pressed.

Adjusting settings

- The cup light remains permanently switched on at the maximum brightness level for as long as the coffee machine stays switched on.

Water hardness

Programme the coffee machine to the water hardness level of your area so that it functions correctly and does not get damaged.

Contact your local water supplier to find out your local water hardness range if necessary.

If you are using bottled drinking water, e.g. mineral water, select settings according to the calcium content. The calcium content is specified on the label of the bottle in mg/l Ca²⁺ or ppm (mg Ca²⁺/l).

Do not use carbonated water.

The hardness level is set to 21 °dH by default.

Water hardness		Calcium content mg/l Ca ²⁺ or ppm (mg Ca ²⁺ /l)	Setting s
°dH	mmol/l		
1	0.2	7	1
2	0.4	14	2
3	0.5	21	3

61–70	10.9–12.5	430–500	61–70

Adjusting settings

Tip: If your water hardness is >21 °dH (3.8 mmol/l), we recommend using bottled drinking water instead (< 150 mg/l Ca^{2+}). This will mean your coffee machine will need to be descaled less often and there will be less impact on the environment because less descaler will be used.

System lock

You can lock the coffee machine to prevent it being used without your knowledge, by children, for example.

Temporarily deactivating the system lock

■ Press and hold *OK* for 6 seconds.

The system lock is reactivated when the coffee machine is next switched off.

Miele@home

The coffee machine is equipped with a WiFi module and enabled for Miele@home.

Depending on whether you have connected the coffee machine to your network or not, the following options are displayed under Miele@home:

- **Set up:** This option only appears if the coffee machine has never been connected to a WiFi network or if the network configuration has been reset.
- **Deactivate*/Activate*:** The settings for the WiFi network are retained, but the network is switched on or off.
- **Connection status*:** Information about the WiFi connection is displayed. The symbols indicate the strength of the connection.

- **Set up again*:** The settings for the current WiFi network will be reset. The WiFi connection will be set up from scratch.
- **Reset*:** Networking is switched off and the settings for the current WiFi network will be reset.

* This menu option appears if Miele@home has been set up and the coffee machine has – where applicable – been connected to a WiFi network.

Networking increases the energy consumption of the coffee machine, even if it is switched off.

The network configuration should be reset whenever the coffee machine is being disposed of or sold, or if a used coffee machine is being put into operation. This is the only way to ensure that all personal data has been removed and the previous owner will no longer be able to access the coffee machine.

Remote control

The Remote control menu option appears if Miele@home has been set up and the coffee machine has been connected to a WiFi network.

You can change the coffee machine settings, for example, in the Miele app when remote control is switched on. To start making a drink via the app, MobileStart must be activated as well.

The remote control function is switched on by default.

RemoteUpdate

The RemoteUpdate function allows the software on your coffee machine to be updated. If an update is available for your coffee machine, it will automatically download it. Updates will not be installed automatically. They must be initiated manually.

If you do not install an update, you can continue to use your coffee machine in the usual way. However, Miele recommends installing updates.

The RemoteUpdate menu option is only displayed and can only be selected if the requirements for using Miele@home have been met.

The RemoteUpdate function is activated by default. Available updates will be downloaded automatically but will only be installed if you initiate installation manually.

Deactivate RemoteUpdate if you do not want any updates to be downloaded automatically.

Running a RemoteUpdate

Information about the content and scope of an update is provided in the Miele app.

A message will appear in your coffee machine display if an update is ready for installation.

You can install the update immediately or postpone this until later. You will be reminded about the update the next time you switch the coffee machine on. Deactivate RemoteUpdate if you do not want to install the update.

The update may take several minutes.

Please note the following information about the RemoteUpdate function:

- You will only receive a message when a RemoteUpdate is available.
- Once a RemoteUpdate has been installed, it cannot be undone.
- Do not switch the coffee machine off during the update. Otherwise, the update will be aborted and will not be installed.
- Some software updates can only be carried out by the Miele Customer Service Department.

Software version

The “Software version” menu option is intended for the Miele Customer Service Department. You do not need this information for domestic use.

Showroom programme (Demo mode)

Do not activate this function for domestic use.

The Showroom programme | Demo mode function enables the coffee machine to be demonstrated in shops or showrooms. In this mode, the appliance lights up but no drinks can be prepared and no maintenance programmes can be run.

You can activate demo mode without commissioning the appliance for the first time. Switch the coffee machine on and off again. Press the ↵ control for 5 seconds straight away. Demo mode is activated.

Adjusting settings

Factory defaults

You can reset the coffee machine to its factory default settings.

The following will **not** be reset:

- The number of drinks dispensed and the appliance status (No. of portions until appliance needs descaling, ... brew unit needs degreasing)
- Language
- Profiles and the associated drinks
- Miele@home

Risk to health due to inadequate cleaning

Heat and moisture inside the coffee machine can cause coffee residues to become mouldy and/or milk residues to go off and pose a risk to health.

Carefully clean the coffee machine regularly.

Overview of cleaning intervals

Recommended frequency	What do I have to clean / maintain?
Daily (at the end of the day)	Water container
	Grounds container
	Drip tray and drip tray cover
	Milk container
	Milk siphon
Once a week (more often if heavily soiled)	Central spout
	Milk pipework rinse valve and connecting pieces (with cleaning brush)
	Brew unit
	Interior area underneath the brew unit
	Casing (especially important immediately after descaling)
Once a month	Bean container and ground coffee chute
	Water container filter
	Steam jet (with cleaning brush)
Once a year (more often if required)	Grease the brew unit (with silicone grease)
When prompted	Clean the milk pipework (with 1 cleaning stick)
	Degrease the brew unit (with 1 cleaning tablet)
	Descale the appliance (with 1 descaling tablet)

Cleaning and care

Cleaning by hand or in the dishwasher

The brew unit is **not** dishwasher safe. Clean the brew unit by hand only under warm running water. **Do not use washing-up liquid or any other cleaning agent.**

The following components must be cleaned **by hand only**:

- Central spout stainless steel cover
- Brew unit
- Water container lid
- Bean container lid
- Lower panel

 Risk of damage as a result of excessively high dishwasher temperatures.

Components may be ruined (e.g. may become warped) if washed in a dishwasher at temperatures higher than 55 °C.

For dishwasher-safe components, always select dishwasher programmes with a maximum temperature of 55 °C.

Contact with natural dyes such as those found in carrots, tomatoes and ketchup may discolour the plastic parts in the dishwasher. This discolouration does not affect the stability of the parts.

The following components are **dishwasher safe**:

- Drip tray and lid
- Drip tray cover
- Waste container

- Water container
- Central spout (without stainless steel cover)
- Milk pipework with rinse valve
- Milk siphon
- Milk flask with lid (included depending on model)

 Danger of burning and scalding on hot components or by hot liquids. Components can become very hot during operation. Touching hot components can cause burning. The liquids and steam dispensed are very hot and can cause scalding.

Keep well away from the area underneath the spouts when hot liquids and steam are being dispensed.

Always allow the coffee machine to cool down before cleaning it.

Please be aware that water in the drip tray can also be very hot.

 Risk of damage due to moisture ingress.

The steam from a steam cleaning appliance could reach live electrical components and cause a short circuit.

Do not use a steam cleaner to clean the coffee machine.

It is important to clean the machine regularly, as the used coffee grounds will soon go mouldy. Milk residues can go off and can block the milk pipework.

Unsuitable cleaning agents

Contact with unsuitable cleaning agents can alter or discolour all surfaces. All surfaces are susceptible to scratching.

Remove all cleaning agent residues immediately. Make sure you remove any spillages or splashes of descaler immediately.

To avoid damaging the surfaces, do not use:

- Cleaning agents containing soda, ammonia, acids or chlorides
- Solvent-based cleaning agents
- Disinfectant cleaning agents and hand sanitiser gel
- Cleaning agents containing descaling agents (unsuitable for cleaning the casing)
- Stainless steel cleaners
- Dishwasher cleaning agents (unsuitable for cleaning the casing)
- Glass cleaning agents
- Cleaning agents for ceramic glass hobs
- Oven cleaners
- Steam oven cleaning agents (DGClean)
- Abrasive cleaning agents, e.g. powder cleaners and cream cleaners
- Hard, abrasive sponges, e.g. pot scourers, brushes or sponges which have been previously used with abrasive cleaning agents
- Eraser stain remover blocks
- Sharp metal scrapers
- Steel wool or stainless steel wire scourers
- Sunscreen

Cleaning the drip tray and waste container

Clean the drip tray and waste container **every day** to avoid unpleasant smells and mould.

The waste container is located in the drip tray. Water from rinsing also collects in the waste container.

A prompt will appear in the coffee machine display when the drip tray and/or the waste container is full and needs to be emptied. Empty the drip tray **and** the waste container.

 Risk of burns!

If the rinsing process has just finished, wait a while before removing the drip tray from the coffee machine. The water used for rinsing will continue to run out of the coffee spouts for a while.

Remove the drip tray and the waste container while the coffee machine is switched on. Otherwise the message Empty and refill the drip tray and the waste container will appear in the display even though the drip tray and/or the waste container are not filled to the maximum level.

- Push the central spout up as far as it will go.

Cleaning and care

- Pull the drip tray carefully out of the coffee machine.
- Remove the lid ①.
- Empty the drip tray **and** the waste container.
- Remove the drip tray cover ② and lower panel ③.

Clean the lower panel by hand only using warm water and a little washing-up liquid. All other parts are dishwasher-safe.

- Clean all parts thoroughly.
- Clean the inside of the coffee machine underneath where the drip tray goes.
- Reassemble all parts.
- Push the drip tray back into the coffee machine.

Make sure the drip tray has been pushed right into the coffee machine as far as it will go.

Cleaning the drip tray cover

- Remove the drip tray cover.
- Clean the drip tray cover by hand using warm water and a little washing-up liquid.
- Dry the drip tray cover.

- Refit the drip tray cover. Make sure that the drip tray cover is correctly fitted (see picture).

Tip: To give the drip tray cover an extra thorough clean, clean it in the dishwasher from time to time.

Cleaning the water container

Clean the water container lid **by hand only** using warm water and a little washing-up liquid.

Clean the water container every day.

- Press on the mark on the water container lid.
- Pull the water container up by the lid to remove it.

- Remove the lid from the container and wash it by hand.
- Clean the water container by hand using warm water and a little washing-up liquid. Dry the water container.

Tip: To give the water container an extra thorough clean, clean it in the dishwasher from time to time.

- Carefully clean and dry the surface the water container sits on, taking special care to clean the recesses properly.
- Reassemble the water container.

Make sure that the valve, the underside of the water container and the surface under the water container are clean. Otherwise the water container will not sit correctly.

Cleaning the water container filter

Clean the water container filter once a month.

The water container filter is located under the water container.

- Remove the water container.

- Unscrew the cap. Remove the sealing ring and the filter.
- Rinse all parts carefully under running water.
- Then replace the water container filter (with the cross facing upwards) and then the sealing ring. Finally screw the cap back on tightly.
- Put the water container back in place.

Cleaning the central spout

Clean the central spout's stainless steel cover **by hand only** using warm water and a little washing-up liquid. All other parts are dishwasher-safe.

Use the supplied cleaning brush for parts that are difficult to reach in the dispensing unit.

Cleaning and care

Tip: Stubborn soiling is easier to clean if you soak the individual components overnight in water and washing-up liquid. Rinse the components under running water afterwards.

Dismantling the central spout

- Push the central spout right down and remove the stainless steel cover by pulling it off towards you.

- Remove the dispensing unit to the front.

- Pull the upper silicone section with the aperture for the milk pipework (1) off the black holder (2).

- The grey silicone section (1) contains a black, cylindrical component (3): pull out the black component.
- Remove the dispensing spouts (4).

Tip: Soak the spouts (4) in water with a little washing-up liquid for around 1 hour to remove stubborn deposits. Then “knead” the spouts.

Cleaning the central spout

- Pull the grey silicone insert ⑤ out of the black component ③.
- Clean the small pipe on the black component ③ with the brush, as shown in the illustration.

- Clean all apertures on the black holder ② with the cleaning brush.

- Angle the cleaning brush slightly and clean both spouts.
- Clean all parts thoroughly.
- Rinse all parts under running water.

- Clean the surfaces of the central spout with a damp sponge cloth.

Reassembling the central spout

The dispensing unit is easier to reassemble if the individual parts are dampened with water.

- Fit the dispensing unit back together.
- Push the spouts ③ firmly all the way round so that the dispensing unit is firmly seated in the groove.
- Refit the dispensing unit onto the central spout.

Cleaning and care

- Replace the stainless steel cover and connect the milk pipework if required.

Tip: The “seam” on the milk pipework and on the central spout makes it easier to assemble.

Cleaning the steam jet

Clean the steam jet once a month.

- Push the central spout right down and remove the stainless steel cover by pulling it off towards you.
- Remove the dispensing unit to the front.

Push the cleaning brush a max. of 1 cm into the steam jet.

- Clean the steam jet with the cleaning brush.
- Push the dispensing unit back into the central spout and replace the stainless steel cover.

Cleaning the milk pipework and rinse valve

Risk of damage due to incorrect cleaning.

The silicone plug can be damaged by pointed objects, e.g. the supplied cleaning brush, and stop working.

Be sure to remove the silicone plug before cleaning the rinse valve body with a cleaning brush or similar utensil.

Do not use pointed objects, e.g. a needle, to clean the silicone plug.

Do not move or remove the white balls in the silicone plug.

Only clean the silicone plug under running water and/or in the dishwasher. **Do not use** the cleaning brush supplied with the appliance.

Clean the milk pipework and rinse valve at least once a week.

- Pull the silicone plug out of the rinse valve body.

- Rinse the silicone plug under running water. **Do not use** pointed objects to remove any milk residues.

- Use the brush to clean the rinse valve body under running water.

- Also clean the hose connections in the rinse valve body. To do this, insert the cleaning brush into both openings and move the brush back and forth.

- Rinse the milk pipework and the rinse valve body under running water.
- If necessary, soak all parts overnight in water and a little washing-up liquid.
- Rinse all parts under running water.
- Reassemble the rinse valve.

Tip: To give all parts an extra thorough clean, clean them in the dishwasher from time to time.

Cleaning the milk siphon

Clean the milk siphon every day.

- Rinse the milk siphon under running water.
- Remove the connecting piece from the stainless steel tube.
- Clean the parts by hand under running water with a little washing-up liquid.
- If necessary, soak the parts overnight in water and a little washing-up liquid.

Cleaning and care

- Rinse the parts under running water afterwards.
- Dry the parts.

Tip: To give the individual parts an extra thorough clean, clean them in the dishwasher from time to time.

Cleaning the milk container

Clean the milk container every day.

- Unscrew the lid from the milk container glass.
- Remove the stainless steel tube.

If necessary, you can remove the connecting piece and sealing ring from the milk container lid. Once you have removed the stainless steel tube, the connecting piece is easy to push out from the inside of the lid.

- Clean all parts of the milk container by hand using hot water and a little washing-up liquid.
- Dry all parts thoroughly.

Tip: To give the individual parts of the milk container an extra thorough clean, clean them in the dishwasher from time to time.

Cleaning the bean container and ground coffee chute

 **Danger of injury from the grinder!**
Switch off the coffee machine and disconnect it from the power supply before cleaning the bean container.

Coffee beans contain oils which can deposit on the walls of the bean container and hinder the flow of the beans. Therefore, clean the bean container regularly with a soft, dry cloth.

- Open the bean container.
- Remove any coffee beans.
- Clean the bean container with a soft, dry cloth.

The bean container can now be refilled.

If necessary, clean the ground coffee chute:

- Open the coffee chute and remove any ground coffee residues.

Tip: Use a vacuum cleaner to remove any dry ground coffee residues from the bean container and the ground coffee chute.

Cleaning the brew unit and interior

To ensure good tasting coffee and to prevent the formation of microbes in the appliance, clean the brew unit and the appliance interior at least once a week.

- Open the appliance door.

- Press and hold the button on the end of the brew unit handle ① and, whilst doing so, turn the handle to the left ②.

When you have removed the brew unit, **do not** change the position of the handle on the brew unit.

- Carefully pull the brew unit out of the coffee machine.

The moving parts of the brew unit are lubricated.

Cleaning agents will damage the brew unit.

Clean the brew unit **by hand only** using warm water. **Do not use any cleaning agents.**

- Clean the brew unit by hand under warm running water **without using cleaning agents.**

- Clean any ground coffee residues off the brew unit filter.
- Dry the funnel to prevent ground coffee sticking to it the next time a coffee is made.

- Clean the inside of the coffee machine. Make sure that the areas highlighted in the illustration are cleaned especially well.

Tip: Use a vacuum cleaner to remove dry ground coffee residues.

- Push the brew unit back into the coffee machine.

Cleaning and care

- Press the button on the end of the brew unit handle ① and, whilst doing so, turn the handle to the right ②.
- Close the appliance door.

Cleaning the casing

If soiling is allowed to stay on for a long time or there is contact with unsuitable cleaning agents, surfaces can alter or discolour.

Remove any soiling immediately. Ensure that any splashes of descaler are wiped up immediately.

- Switch the coffee machine off.
- Clean the appliance front with a clean sponge cloth and a solution of warm water and washing-up liquid.
- Dry all surfaces with a soft cloth.

Tip: You can also clean the appliance casing with the Miele all purpose microfibre cloth.

Maintenance programmes

The coffee machine has the following maintenance programmes:

- Rinsing the machine
- Rinsing the milk pipework
- Cleaning the milk line

- Degreasing the brew unit
- Descaling the machine

Carry out the relevant maintenance programme when the prompt to do so appears in the display. You can also start maintenance programmes at any time so that the coffee machine does not prompt mandatory cleaning at an inconvenient time.

Please note that each maintenance programme must be carried through to the end and cannot be cancelled.

Opening the Maintenance menu

You can find the maintenance programmes in the Maintenance menu. Run the relevant maintenance programme when the prompt to do so appears in the display or when you decide you need to.

- Touch .
- Select Maintenance.
- Confirm with *OK*.

You can now select a maintenance programme.

Tip: To save you having to empty the drip tray too often and to catch any splashes, you can place a container under the central spout.

Rinse the appliance

If you have made a coffee drink, the coffee machine will rinse the coffee pipework automatically before switching off.

You can also start the Rinse the appliance function manually.

Rinsing the milk pipework

If you have not made any milk drinks for a while, rinse the milk pipework thoroughly before making the first drink.

- Touch .
- Select Maintenance | Rinse the milk pipework.
- Confirm with *OK*.

Place rinsing valve in drip tray **will appear on the display.**

- Insert the rinse valve into the right aperture in the drip tray cover.
- Confirm with *OK*.

The milk pipework will now be rinsed.

Cleaning the milk pipework

The Clean the milk pipework maintenance programme lasts for approx. 15 minutes. You need 1 stick of cleaning agent for milk pipework for the maintenance programme.

- Touch .
- Select Maintenance | Clean the milk pipework.
- Confirm with *OK*.

The process will start.

- Follow the instructions in the display.

Remove the water container. Fill it with cleaning solution (see Operating instructions) and replace it. **will appear in the display.**

Tip: For optimum cleaning results, we recommend the Miele cleaning agent for milk pipework. The cleaning agent has been specially developed for use with Miele coffee machines and prevents damage to the appliance from unsuitable cleaning agents. You can order the cleaning agent for milk pipework via the Miele online shop, the Miele Customer Service Department or from your Miele dealer.

- Place 1 stick of milk pipework cleaning agent in a container and add **300 ml** of lukewarm water. Stir the solution with a spoon until the cleaning agent powder has fully dissolved.
- Remove and empty the water container.
- Pour the prepared cleaning solution into the water container.
- Put the water container back in place.
- Follow the further instructions given on the display.
- If prompted to do so in the display, rinse the water container thoroughly with clean water. Make sure that **no** cleaning agent is left in the water container.
- Fill the water container with water.

The cleaning process is complete when the drinks menu is shown on the display.

Cleaning and care

Degreasing the brew unit

Ground coffee can collect inside the appliance underneath the brew unit. Heat and moisture can cause mould to develop here.

To prevent mould from building up in this way, remove any damp ground coffee residues at least once a week.

The brew unit must be degreased regularly in order to ensure aromatic coffee and trouble-free operation of the coffee machine. Depending on the natural oil content of the coffee used, the brew unit can become blocked quite quickly.

The maintenance programme for degreasing the brew unit lasts for approx. 10 minutes.

You need 1 cleaning tablet for the maintenance programme.

Tip: We recommend using Miele cleaning tablets to clean the brew unit. These have been specially developed for degreasing the brew unit in Miele coffee machines and prevent subsequent damage.

The cleaning tablets are available to order from the Miele online shop, from the Miele Customer Service Department or from your Miele dealer.

After 200 portions have been dispensed, a message prompting you to degrease the brew unit will appear in the display.

- Confirm with *OK*.

You can degrease the brew unit now or at a later point. The coffee machine will continue to work until you choose to degrease it. To ensure the coffee machine continues to work properly on a long-term basis, we recommend that you degrease the brew unit as soon as you are prompted.

This message will keep being displayed when you switch the coffee machine on until the brew unit has been degreased.

- Touch .
- Select Maintenance | Degrease the brew unit.
- Confirm with *OK*.

The process will start.

Remove the brew unit. Clean the interior of the machine. Rinse the brew unit by hand and refit it with a cleaning tablet in it, as shown on the display.

- Follow the instructions in the display.
- Open the appliance door.

- Press and hold the button on the end of the brew unit handle ① and, whilst doing so, turn the handle to the left ②.

Cleaning and care

When you have removed the brew unit, **do not** change the position of the handle on the brew unit.

- Carefully pull the brew unit out of the coffee machine.

The moving parts of the brew unit are lubricated.

Cleaning agents will damage the brew unit.

Clean the brew unit **by hand only** using warm water. **Do not use any cleaning agents.**

- Clean the brew unit by hand under warm running water **without using cleaning agents.**

- Clean any ground coffee residues off the brew unit filter.
- Dry the funnel to prevent ground coffee sticking to it the next time a coffee is made.

- Clean the inside of the coffee machine. Make sure that the areas highlighted in the illustration are cleaned especially well.

Tip: Use a vacuum cleaner to remove dry ground coffee residues.

- Drop **1** cleaning tablet into the top of the brew unit (arrow).
- Push the brew unit back into the coffee machine.

Cleaning and care

- Press the button on the end of the brew unit handle ① and, whilst doing so, turn the handle to the right ②.
- Close the appliance door.

The time left for the maintenance programme is shown in the display.

The maintenance programme is complete when the drinks menu appears on the display.

Descaling the machine

Risk of damage from spilt descaling solution.

Sensitive surfaces and/or natural floors can suffer damage.

Wipe up any spillages of descaling agent immediately.

Limescale builds up in the coffee machine through use. How often the appliance needs to be descaled will depend on the water hardness level in your area. Limescale must be removed regularly.

The appliance will guide you through the descaling process. Various messages will appear in the display, e.g. you will be prompted to empty the drip tray or fill the water container.

Descaling **must be carried out**. The process takes approx. 15 minutes.

The coffee machine will give you plenty of warning when it needs to be descaled. As of this point, the display will indicate how many more drinks can be made before descaling becomes absolutely essential. This number is indicated whenever a drink is made.

- Confirm the message with *OK*.

When the number of remaining portions reaches 0, the coffee machine will lock out.

You can switch the coffee machine off if you do not want to run the descaling programme at this point in time. You can not make any drinks until the machine has been descaled.

Descal the appliance will appear on the display.

- Confirm with *OK*.

The process will start.

- Follow the instructions in the display.

If the operating temperature is too high for the descaling process, the coffee machine cools down. No separate message is shown on the display during the cooling phase.

When Fill the water container with lukewarm water and descaling agent up to the S symbol and replace it appears in the display, proceed as follows.

For optimum descaling results, we recommend using the Miele descaling tablets.

The descaling tablets have been specially developed for Miele coffee machines.

Other descalers, which contain other acids besides citric acid and/or other undesirable substances, such as chlorides for example, can cause damage to the product. Moreover, the descaling result required cannot be guaranteed if the descaling solution was not of the appropriate concentration.

Miele descaling tablets are available to order via the Miele online shop, from the Miele Customer Service Department or from your Miele dealer.

You will need **1** descaling tablet to descale the machine.

- Fill the water container to the S mark with lukewarm water.
- Add **1** descaling tablet to the water container.

Follow the instructions for the descaling agent mixing ratio carefully. Do not fill the water container with too much or too little water. Otherwise, the descaling process will be cancelled prematurely.

- Push the water container back into the machine.
- Follow the further instructions given on the display.

When Fill the water container up to the descaling symbol S and replace it. Close the door. **appears** in the display:

- Remove the water container and rinse it thoroughly with clean water. Ensure that **no** descaling solution residue remains in the water container. Fill the water container at least up to the S mark with fresh drinking water.

The descaling process is complete when the drinks menu appears.

Troubleshooting

Many malfunctions and faults can be easily remedied. You can save time and money in many cases, as you do not need to contact Customer Service.

More information to help you remedy faults yourself can be found at www.miele.co.uk/support/customer-assistance.

Messages in the display

Error messages must be confirmed with *OK*, otherwise the message can reappear in the display even though the problem has been remedied.

Follow the instructions which appear in the display to remedy the problem.

If after this, the fault message appears in the display again, contact Miele Service.

Problem	Cause and remedy
F1, F2, F80, F82	There is an internal fault. ■ Switch the coffee machine off with the On/Off button  . Wait for approximately 1 hour before switching the appliance back on again.
F41, F42, F74, F77, F235, F236	There is an internal fault. ■ Switch the coffee machine off with the On/Off button  . Wait for approximately 2 minutes before switching the appliance back on again.
F10, F17	No water or very little water is being drawn in. ■ Remove the water container. Fill the water container with fresh tap water and reinsert the water container. ■ Remove and clean the water container filter (see “Cleaning and care – Removing and cleaning the water container filter”).

Problem	Cause and remedy
<p>F73 or Check the brew unit</p>	<p>The brew unit cannot be positioned correctly.</p> <ul style="list-style-type: none">■ Switch the coffee machine off with the On/Off button .■ Switch off at the wall socket and unplug the coffee machine. Wait for two minutes before inserting the power plug back in the socket and switching on.■ Remove the brew unit and rinse under warm running water.  <ul style="list-style-type: none">■ Push the coffee ejector of the brew unit into the correct position.■ Do not fit the brew unit. Close the appliance door and switch the coffee machine on with the On/Off button . <p>This will initialise the brew unit drive and put it back into the start position.</p> <ul style="list-style-type: none">■ When Insert the brew unit appears in the display, put the brew unit back in the appliance. Close the appliance door.

Troubleshooting

Problem	Cause and remedy
Too much ground coffee	<p>There is too much ground coffee in the ground coffee chute.</p> <p>The brew unit cannot compact ground coffee if more than 12 g (2 level spoonfuls) of ground coffee are added to the coffee chute. The ground coffee will be emptied into the waste container and the fault message will appear in the display.</p> <ul style="list-style-type: none">■ Switch the coffee machine off with the On/Off button .■ Remove and clean the brew unit (see “Removing the brew unit and cleaning it by hand”).■ Remove the ground coffee inside the coffee machine, e.g. with a vacuum cleaner.■ Place a maximum of 12 g of coffee in the ground coffee chute.
	<p>There is too much ground coffee in the ground coffee chute.</p> <p>Certain types of coffee produce a lot of coffee when they are ground. Usually this is because the grinder is set too coarse and the maximum quantity of coffee is set.</p> <ul style="list-style-type: none">■ Set the grinder to a finer setting.■ Select a smaller quantity of coffee. <p>If the coffee is still not to your taste, e.g. too weak, try another type of bean.</p>

Unusual performance of the coffee machine

Problem	Cause and remedy
The display remains dark when the coffee machine is turned on using the On/Off button .	The On/Off button  was not held for long enough. ■ Touch and hold the On/Off button  for at least 3 seconds.
	The plug is not inserted in the socket correctly. ■ Insert the plug into the socket.
	The fuse has tripped because the coffee machine, voltage or another appliance is defective. ■ Switch off at the wall socket and unplug the coffee machine. ■ Contact a qualified electrician or the Miele Customer Service Department.
The lighting remains off after the coffee machine has been switched on.	The lighting has been switched off. ■ Switch the lighting on (see “Settings - Lighting”).
	The lighting is faulty. ■ Call Service.
The coffee machine turns off suddenly.	The factory set switch-off time (20 minutes) or the switch-off time you have programmed has been reached. ■ If required, you can select a new switch-off time (see “Settings – Timer”).
	The plug is not inserted in the socket correctly. ■ Insert the plug into the socket.
The sensors do not react to touch. The coffee machine cannot be operated.	There is an internal fault. ■ Disconnect the machine from the power supply by removing the plug from the socket.
The display is hard to see or not able to be read.	The display brightness has been set too low. ■ Change this setting (see “Settings”).

Troubleshooting

Problem	Cause and remedy
Fill and replace the water container appears in the display even though the water container is full and in the machine.	<p>The water container is not in the correct position.</p> <ul style="list-style-type: none"> ■ Remove the water container and push it back in again. ■ Remove and clean the water container filter (see “Cleaning and care – Cleaning the water container filter”). <p>The water container was not correctly filled and refitted for descaling.</p> <ul style="list-style-type: none"> ■ Fill the water container to the descaling symbol  and restart the descaling programme.
Fill and replace the water container appears after switching on even though the container is filled and fitted in the machine. The appliance does not rinse.	<p>The coffee machine needs descaling.</p> <ul style="list-style-type: none"> ■ Switch the coffee machine off with the On/Off button . Wait approx. 1 hour. ■ Switch the appliance back on again. As soon as Heating-up appears, touch the  sensor control and then select Descale the appliance. ■ Descale the coffee machine.
After switching on the machine, the message Empty the drip tray and the waste container appears even though they are both empty.	<p>This is not a fault.</p> <p>When the drip tray and waste container are emptied, the internal counter is not reset after the coffee machine has been switched off. Empty the drip tray and the waste container appears in the display even though the drip tray and the waste container are not filled to the maximum.</p>

Problem	Cause and remedy
<p>Neither milk nor milk froth comes out of the central spout.</p>	<p>The milk pipework was connected incorrectly to the central spout.</p>  <p>The seam on the milk pipework, central spout and on the rinse valve makes it easier to assemble.</p> <ul style="list-style-type: none"> ■ Check whether the milk pipework is correctly connected to the central spout. <p>The milk pipework is blocked.</p> <ul style="list-style-type: none"> ■ Clean the central spout and milk pipework carefully with the brush.
<p>Empty the drip tray and the waste container appears in the display, even though the drip tray has been emptied.</p>	<p>This is not a fault. The drip tray was not properly removed and/or replaced too quickly.</p>
<p>Insert the drip tray and the waste container appears in the display even though both are fitted.</p>	<p>The drip tray is not in the correct position and is therefore not detected.</p> <ul style="list-style-type: none"> ■ Empty the drip tray and the waste container. Reassemble all parts and push the drip tray back as far as it will go in the coffee machine.

Troubleshooting

Problem	Cause and remedy
<p>The waste container is overflowing even though the drip tray and waste container have been emptied following each reminder.</p>	<p>The drip tray has probably been removed without the waste container being emptied. Removing the drip tray resets the internal counter for emptying the waste container.</p> <ul style="list-style-type: none"> ■ Always empty the waste container if you remove the drip tray. <p>Certain types of beans produce a lot of coffee when they are ground, meaning that larger coffee pucks are pressed.</p> <ul style="list-style-type: none"> ■ Adapt the quantity of coffee and grinder setting if necessary. ■ Empty the waste container more often than indicated in the display.
<p>Fill the bean container appears in the display even though the bean container has just been filled.</p>	<p>This is not a fault.</p> <ul style="list-style-type: none"> ■ Confirm the message with <i>OK</i>. <p>Insufficient coffee beans are getting into the grinder. Have you used a dark roast? This type of coffee bean is often more oily. These oils can cling to the inside of the coffee bean container and hinder the flow of beans.</p> <ul style="list-style-type: none"> ■ Make a coffee and observe whether the coffee beans drop into the coffee bean container. ■ Clean the coffee bean container more often if you are using a darker, more oily bean. <p>Try other types of coffee bean which are less oily.</p>
<p>The coffee machine does not rinse itself when turned on.</p>	<p>This is not a fault. If the coffee machine is already at operating temperature, rinsing will not take place.</p>

Problem	Cause and remedy
<p>Coffee dispensing is repeatedly interrupted and the message Fill the bean container appears in the display.</p>	<p>This is not a fault. The brew unit has not detected the ground coffee. Certain types of coffee produce a small amount of coffee when they are ground. In such cases, the grinder is usually set to fine and the minimum quantity of coffee is set.</p> <ul style="list-style-type: none"> ■ Confirm the message with <i>OK</i>. <p>If the coffee is too strong for you or tastes bitter, try a different type of coffee bean.</p> <p>If the display appears with all types of coffee:</p> <ul style="list-style-type: none"> ■ Set the grinder to a coarser setting (see “Degree of grinding”). ■ Select a larger quantity of coffee. <p>Don’t forget to check any drinks changed in “Profiles”.</p> <hr/> <p>If the message only appears when dispensing certain drinks:</p> <ul style="list-style-type: none"> ■ Check the quantity of coffee set for this drink (see “Quantity of coffee”). Select a larger quantity of coffee. ■ You may also need to set a coarser grinder setting.
<p>The descaling process was started inadvertently.</p>	<p>The descaling programme cannot be stopped once <i>OK</i> has been touched. It must now be completed through to the end. This is a security setting to fully descale the coffee machine. It ensures a long service life and that your coffee machine is functioning correctly.</p> <ul style="list-style-type: none"> ■ Descal the coffee machine (see “Descaling the appliance”).
<p>Coffee is not flowing out of the central spout. Or coffee is only being dispensed via one spout.</p>	<p>The central spout has a blockage.</p> <ul style="list-style-type: none"> ■ Rinse the coffee pipework (see “Cleaning and care – Rinsing the appliance”). <p>Is there still no coffee flowing out of the central spout or is it only dispensed via one side?</p> <ul style="list-style-type: none"> ■ Dismantle the central spout and clean all parts carefully. Use the supplied cleaning brush for parts that are difficult to reach. ■ Make sure all parts are reassembled correctly. <hr/> <p>The brew unit is blocked.</p> <ul style="list-style-type: none"> ■ Degrease the brew unit (see “Cleaning and care – Degreasing the brew unit and cleaning the interior”).

Troubleshooting

Problem	Cause and remedy
<p>The milk sputters when it is dispensed. Hissing noises can be heard when milk is being heated up or frothed. Although the milk should be frothed, only hot milk comes out of the central spout.</p>	<p>The milk pipework was not correctly fitted.</p> <ul style="list-style-type: none"> ■ Pay attention to the seam on the double hose when you connect the milk pipework into the central spout. ■ If you have disconnected the milk pipework from the rinse valve: the double hose has different diameters. Make sure all parts are assembled correctly.
	<p>The milk temperature is too high. Good milk froth can only be achieved with cold milk (below 10 °C).</p> <ul style="list-style-type: none"> ■ Check the temperature of the milk.
	<p>The central spout is not fitted correctly and is taking in air. Or the spouts are blocked.</p> <ul style="list-style-type: none"> ■ Check whether the central spout has been assembled correctly. Make sure that all parts are tightly connected to one another. ■ Clean the central spout. Knead the spouts under running water to loosen any soiling.
	<p>The milk pipework, connecting pieces, the stainless steel tube of the milk flask or the milk siphon are blocked.</p> <ul style="list-style-type: none"> ■ Clean all parts carefully with the cleaning brush.
	<p>The steam jet on the central spout has a blockage.</p>
	
<ul style="list-style-type: none"> ■ Clean the steam jet with the cleaning brush (see illustration). 	

Troubleshooting

Problem	Cause and remedy
Coffee grounds have settled on the lid of the drip tray and in the interior around the brew unit.	This is not a fault. The movement of the brew unit during the brewing process can cause some ground coffee to fall around it. The type of beans used, the fineness of the ground coffee and the quantity of coffee ground also affect the quantity. Important! Clean the inside of the coffee machine regularly to prevent mould etc. Check whether the quantity of coffee is set too high.
The display lights up but the coffee machine does not heat up and no drinks are made. The coffee machine cannot be turned off.	The Demo mode for demonstrating the coffee machine in the showroom has been activated. ■ Deactivate Demo mode.

Troubleshooting

Unsatisfactory results

Problem	Cause and remedy
The coffee is not hot enough.	The cup has not been pre-heated. The smaller the cup and the thicker its sides, the more important it is to pre-heat it. ■ Pre-heat the cups, e.g. using the cup heating (depending on model).
	The brewing temperature has been set too low. ■ Set a higher brewing temperature.
	The filters in the brew unit are blocked. ■ Remove the brew unit and clean it by hand. ■ Degrease the brew unit.
The heating-up time is getting longer, the amount of water being dispensed is incorrect and the coffee machine is not performing properly. Coffee flows very slowly out of the central spout.	The coffee machine needs descaling. ■ Descale the coffee machine.
The quantity of dispensed coffee has changed.	The brew unit is blocked. ■ Degrease the brew unit (see “Cleaning and care – Degreasing the brew unit and cleaning the interior”).
The consistency of the milk froth is unsatisfactory.	The milk temperature is too high. Good milk froth can only be achieved with cold milk (below 10 °C). ■ Check the temperature of the milk in the milk flask.
	The milk pipework is blocked. ■ Clean the central spout and milk pipework with the brush.
The coffee grinder makes a louder noise than usual.	The coffee bean container has become empty during the grinding process. ■ Fill the coffee bean container with fresh beans.
	There may be foreign objects such as plastic or stones in amongst the coffee beans. ■ Switch the coffee machine off immediately. Call Service.

Troubleshooting

Problem	Cause and remedy
The coffee flows too quickly into the cup.	The coffee is too coarsely ground. ■ Set the grinder to a finer setting (see “Grinder setting”).
The coffee is dispensed too slowly into the cup.	The brew unit is blocked. ■ Degrease the brew unit (see “Cleaning and care – Degreasing the brew unit and cleaning the interior”).
There is no crema on the coffee or espresso.	The coffee beans are no longer fresh. If roasted coffee beans are stored open for too long, the carbon dioxide gradually escapes from the coffee beans. The crema is no longer formed during dispensing. Of course, you can still use the coffee beans.

Customer Service Department

Information to help you rectify faults yourself and about Miele spare parts can be found at www.miele.com/service.

Contact in the event of a fault

In the event of any faults which you cannot remedy yourself, please contact your Miele dealer or the Miele Customer Service Department.

You can book a Miele Customer Service Department call-out online at www.miele.com/service.

Contact information for the Miele Customer Service Department can be found at the end of this document.

Please quote the model identifier and serial number of your appliance (Fabr./SN/Nr.) when contacting the Miele Customer Service Department. This information can be found on the data plate.

Please note that telephone calls may be monitored and recorded for training purposes and that a call-out charge will be applied to service visits where the problem could have been resolved as described in this booklet.

Warranty

For information on the appliance warranty specific to your country please contact Miele. See back cover for address.

In the UK, your appliance warranty is valid for 2 years from the date of purchase. However, you must activate your cover by calling 0330 160 6640 or registering online at www.miele.co.uk.

EU Conformity declaration

Miele hereby declares that this coffee machine complies with Directive 2014/53/EU.

The complete text of the EU declaration of conformity is available from one of the following internet addresses:

- Products, Download from www.miele.ie
- For service, information, operating instructions etc: go to <https://miele.co.uk/manuals> and enter the name of the product or the serial number

UK Conformity declaration

Miele hereby declares that this coffee machine complies with UK Radio Equipment Regulations 2017, as amended.

The complete text of the UK declaration of conformity is available from one of the following internet addresses:

- Products, Download from www.miele.co.uk
- For service, information, operating instructions etc: go to <https://miele.co.uk/manuals> and enter the name of the product or the serial number

This **Statement of Compliance** confirms this Miele product fully complies with the **Product Security and Telecommunications Infrastructure (Security Requirements for Relevant Connectable Products) Regulations 2023**.

- 1) Household Appliance – *Household coffee maker 392, 393, 395, 396, 503, 505*

Customer Service Department

Transporting the machine

If you are not going to use the coffee machine for an extended period of time, e.g. whilst on holiday, or if it needs to be moved, a number of procedures will need be carried out to ensure its safety.

- Empty and clean the coffee bean container
- Empty and clean the water container
- Evaporate the coffee machine
- Clean the inside of the machine
- Pack the machine securely

Evaporating the coffee machine

 **Caution!** Hot steam is discharged at the spouts. Danger of burning and scalding due to contact with hot steam. Avoid direct contact with hot steam as it is being discharged.

The coffee machine should be evaporated before it is stored for a long period of time or transported any distance – particularly at temperatures below freezing.

Evaporating the appliance involves removing all traces of water from the system to prevent the risk of water and frost damage.

The process cannot be cancelled once it has started and must be carried through to the end.

- Touch the  sensor control.
- Select Further | Settings  | Showroom programme | Evaporate.
- Select Yes.
- Confirm with *OK*.
- Follow the instructions in the display.

When the display goes out, the machine has finished evaporating.

- Switch off the coffee machine and unplug it to disconnect it from the power supply.
- Empty the water container.
- Empty and clean the drip tray and waste container.

Packing the coffee machine securely

Make sure the appliance is clean and dry before packing it. Ground coffee residues can scratch the surfaces. In addition, coffee, milk and water residues cause a build-up of bacteria.

Use the original packaging to pack the coffee machine.

Keep the operating instructions in the box. This means that you have them to hand if you want to reuse the coffee machine.

Technical data

Electricity consumption in standby:	≤ 0.3 W
Electricity consumption in networked standby:	≤ 1.0 W
Pump pressure:	Max. 15 bar
Through-flow heater:	1 stainless steel thermo block
Dimensions (W x H x D):	251 x 359 x 427 mm
Net weight:	9.9 kg
Mains connection cable length:	140 cm
Water container capacity:	1.8 l
Bean container capacity:	Approx. 300 g
Milk container capacity:	0.5 l
Drip tray capacity:	0.8 l
Waste container capacity:	Max. 10 portions of coffee grounds
Central spout:	Height adjustable from 80-140 mm
Grinder:	Steel conical grinder
Grinder setting:	5 settings
Ground coffee amount:	Max. 12 g
Frequency band:	2.400–2.4835 GHz
Max. transmission power	< 100 mW

(The milk flask is supplied with the CM 6360, CM 6560.)

Optional accessories

These products and other useful accessories can be ordered via the Miele online shop, from the Miele Customer Service Department or from your Miele dealer.

- **Microfibre cloth**
for removing finger marks and light soiling
- **Cleaning tablets**
for degreasing the brew unit
- **Descaling tablets**
for descaling the water pipework
- **Milk flask with lid**
For storing and preparing milk
- **CJ Jug 1.0 l**
Insulated flask for coffee or tea (pot function)
- **Miele Black Edition One for all**
Whole coffee beans – perfect for making espresso, café crema and speciality coffees with milk
- **Miele Black Edition Espresso**
Whole coffee beans – perfect for making espresso
- **Miele Black Edition Café Crema**
Whole coffee beans – perfect for making coffee
